## Arthritis & Red eyes causing you distress?

Introducing  
a specialised,  
combined clinic

Ocular  
Immunology  
CLINIC

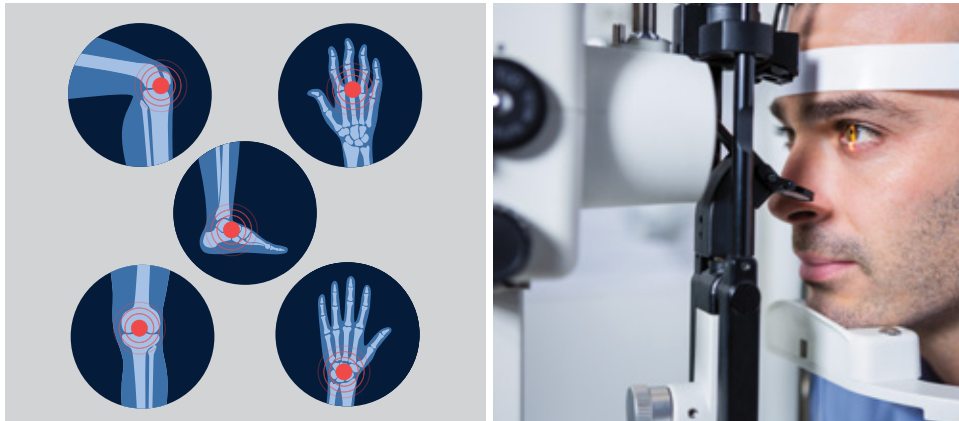

**P. D. HINDUJA HOSPITAL**  
& MEDICAL RESEARCH CENTRE

## Why Ocular Immunology Clinic?

Inflammation of joints, or arthritis, can present in various forms & requires prolonged treatment.

Uveitis, which refers to inflammation of the uveal tissue inside the eye, can cause permanent loss of vision. Arthritis & uveitis may often coexist or present one after the other. At times, one of them may be a "silent bystander". Often, the underlying inflammation causing arthritis & uveitis is inter-related. Auto-immune condition in the eyes are at times associated with systemic rheumatic diseases.

The Combined Ocular Immunology Clinic is a specialised clinic that aims to evaluate & treat patients with a holistic approach".

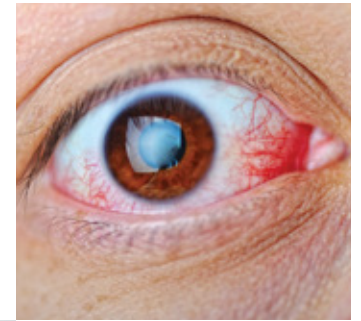

### The Highlights:

- **Combined consultation** with our expert Rheumatologist and Uveitis Specialist (Ophthalmologist).
- **Simultaneous evaluation and diagnosis** by the 2 specialists.
  - **Holistic, most effective, customised treatment plan.**
- **Avoid repeat visits to different specialists and repeat investigations.**

## Who will benefit from this clinic?

- Those with chronic "red eyes" or "painful red eyes"
- Those having frequent "blurring of vision" or "floaters"

- Those suffering from "uveitis" or "eye inflammations"

- Those using frequent "steroid eye drops" or "oral steroids" for "frequent red eyes", "blurring of vision" or "floaters"
- Those suffering from both "joint pains" and "red eyes"

- Those using systemic immune-suppression treatment for both joint pains & red eyes or blurred vision
- Those with pediatric uveitis or children diagnosed with uveitis
